- Research & Development
- Lab Services
- Design Services
- **Construction Services**
- Operational Services
- Future Developments

*Waste Solutions has a long history of constructing facilities for our clients. There is a distinct financial advantage to be had from having the designers of a facility also being responsible for the construction. Our goal is to make the entire process, from inception to operation, as simple and effective as possible.*

We have a number of contractual options which lets our client decide the level of input and involvement they have throughout the process. Our experience puts us in a position to advise our clients on all the options, including the practical, legal, accounting, and management system implications in the use of each type of contract. We identify the priorities, time limitations, financial constraints and quality considerations and provide a proposal best suited to the needs of our client.

Depending on the specific situation, Waste Solutions can also offer finance, or ownership of the solution, to allow clients to focus on their core activities.
