- Cigar® - Biogas Reactors
- Anaerobic Digestion
- Aerobic Treatment
- Odour Control
- Waste Products
- Cap™ Retrofit
- Research & Development
- Lab Services
- Design Services
- Construction Services
- Operational Services
- **Future Developments**

As a world leader in the development and deployment of wastewater treatment and waste to energy solutions Waste Solutions devote considerable time, creative energy and resources to research and development.

Within the company we foster innovative ideas and support ideation, experimentation and prototyping. Our core philosophy is to encourage many ideas and then, through a process of elimination, reduce and evolve these into viable products and services.

Alongside developing new technologies to enhance the versatility of Cigar®, we are also creating a suite of parallel products and services including exploring opportunities for the end processing of biogas and transportation fuel options. Our objective is to continue to turn our knowledge into value for our clients by providing a complete, vertically integrated suite of solutions to support industry and protect the environment.

Prototyping a new Hydraulic Invention
