

WASTE

- Overview
- Manure
- Agricultural
- Industrial
- Food Processing
- Municipal
- **Chemical, Toxic or Difficult Wastes**
- Solid Wastes

Our scientists develop treatments for the most difficult wastes, including; Toxic Chlorinated, Aromatic Hydrocarbons, Oil, Petroleum, Diesel, BTEX, Nylon wastewater.

We are specialists in wastes with high Lipid or Fat content and with the assistance of our in-house, high-tech lab we can analyse and develop solutions for most new and unusual wastes we encounter. It is only by intimate understanding of the underpinning chemical, biochemical and physico-chemical processes and technologies that a fully reliable system is created for a wastewater treatment plant.
