

## WASTE

- Overview
- Manure
- Agricultural
- Industrial
- Food Processing
- Municipal
- Chemical, Toxic or Difficult Wastes
- Solid Wastes

*Wastewater treatment takes many forms and over the years we have worked with an extensive array of different wastes. Waste Solutions has designed and constructed most of the commonly recognised wastewater treatment processes as well as many successful innovations of our own.*

Our expertise in trouble shooting existing facilities has often been called on to correct design mistakes of others or to commission plants where others have run into difficulties. Other areas of speciality include automation, operational support and construction supervision.

In many situations turning waste into energy is not only possible, but also profitable. Waste Solutions can assist clients to understand the revenue potential of wastes and we know the available technologies. Applying the most environmentally sustainable solution often equates to the most commercially sound solution. This is a very happy coincidence and many of our clients can vouch for the reliability, efficiency and cost effectiveness of our waste to energy facilities.
